**About** Student full-stack developer with a love for clean and minimal design along with tidy and efficient back-end code. I have developed a proficiency in the Laravel PHP framework, the Vue JavaScript framework, and Tailwind CSS, a utility-first CSS framework.

Having maintained an interest in computer science for several years, web/software development have become favorite pasttimes of mine. This includes designing and developing websites as well as completing many courses related to web development, such as those available on *laracasts.com* and *codecourse.com*.

When I am not practicing web development, I am usually listening to music. I have a love for jazz, rock, and jam bands. Some of my favorite artists include Phish, Steely Dan, Hall & Oates, Jacob Collier, and David Bowie. I also maintain an interest in photography, a handful of video games, and more recently, 3D graphics using Blender.
